

home heating that's 'cost neutral'

süka – using nature to power your heating for the future

Süka Group have created a new 'cost neutral' way to heat your home or business. Integrating the best of German technologies, Süka brings together the first controlled heating package that covers its running cost.

What's more, there's...

- no annual maintenance
- no replacement of boilers
- and a 25-year guarantee.

So you save even more. Just heat, no fuss.

how it works

The intelligent technologies in Süka heaters give you complete heat control in every room while only using 15 minutes of electricity for every hour's heat. By combining this efficiency with award-winning solar photovoltaic panels, we can estimate your heating cost for the winter and specify PV panels to match your energy needs.

For example, look at these figures for 5 heaters in an average insulated house:

Expected Süka running cost for 24-hour use at 16.73p per kilowatt hour (peak time) and 5.49p per kilowatt hour (off-peak) on Economy 10 Tariff			
Room	Süka heater Kw	Target temperature degrees C	
		Day	Night
Bathroom	0.500	20	16
Hallway	0.800	20	16
Bedroom 1	1.000	20	16
Bedroom 2	1.000	20	16
Lounge	1.500	20	16
Total	4,800		

Usage length			Likely highest running cost of 5 Süka heaters	
25% for every 60 minutes	Day	Night	Total cost	Cost
	12hrs	12hrs	per 24 hrs (£)	per winter 180 days (£)
0.25	14	10	0.1932	£34.77
0.25	14	10	0.3090	£55.63
0.25	14	10	0.3863	£69.54
0.25	14	10	0.3863	£69.54
0.25	14	10	0.5795	£104.30
Total			1.85	£333.77

Only a 1 kilowatt photovoltaic array is needed to generate a tax-free income of £418 a year. This income is guaranteed for 25 years and index linked.

As you can see from the simple example (left), our unique heaters give you the opportunity to generate your 'own fuel' to heat your home.

Think about this:

- An ordinary 2kw heater on for 6 hours a day, will cost £1.68 to run (standard tariff)
- Just 2 night store heaters of 4.5kw will cost £2.47/day on off-peak tariff
- Süka's 4.5kw gives 24 hours controllable heat **for only £1.85**

Our system is perfect for any home – old or new. No matter what fuel you currently use to heat your home, our tailored packages can provide you with a 'cost neutral' solution with minimum fuss.

For good advice, call 0800 5200 333 or visit www.sukagroup.co.uk

Süka Group installations are approved by...

the süka difference

- The sun is the largest power plant we know.
- We have an MCS accredited team.
- A tailored solution specific to your property.
- 25-year guarantee.
- Fully-controllable, near instant heat.
- Healthy heat – radiant warmth.
- Releases no emissions or CO₂.
- Environmentally and eco-friendly.
- Stylish slimline wall-mounted and mobile options.

Süka provides all the technology you need. We will calculate your heating requirement. You just sit back and enjoy the warmth.

cost neutral what does it mean to you?

Let's explain what 'cost neutral' means.

Install the right combination of Süka PVs and heaters: We will guide you on the combination of panels and heaters required to heat your property. The solar PV panels work all year round to turn light from the sun into power.

Get paid for the power you create and use: The Government's FIT (feed-in tariff) program guarantees you a price for the energy you generate – and use. Rates are guaranteed and inflation proof for 25 years!

Get paid for any excess power you generate: You get an agreed rate for any extra electricity you may be able to export to the grid.

You still pay your electricity supplier: Your PVs create power throughout the year to earn you an income to fund your winter heating bills. In short – you use the income from the power you generate to pay your heating bill – so it's a cost neutral way to heat your property.

you can go carbon neutral too

If you're concerned about your impact on the environment why not talk to our engineers about our carbon neutral solution?
